

## ALEA A Fireplace stoves

**The ALEA A fireplace stove will always adapt to your needs. Its rotating combustion chamber ensures you will always have a great view of the beautiful dancing flames, and the accumulation system above the combustion chamber will let you make great use of the heat released during combustion.**

This fireplace stove is suitable for low-energy homes. An EAI (External Air Intake) system is included. The ventilated designer handle permits use when the stove is lit. The door can be locked in the open position. The standard version includes the option to connect an upper or rear flue gas exhaust. Thanks to the secondary air intake, the door glass is air-washed to prevent the cumulation of soot. The combustion chamber is lined with chamotte brick tiles. The primary and secondary air intakes are regulated by a single control element. Additionally, you can purchase extra accumulation elements that radiate heat for up to 4 hours. The rotating combustion chamber allows you to view your fire from multiple angles.
