

The NAVIA fireplace stove brings a perfect symbiosis of design using rounded shapes and powerful functionality. Its generous panoramic glass not only guarantees a breathtaking view of the flames, but also turns a classic stove into a dominant design element that will enrich any interior, whether traditional or modern.

NAVIA H Fireplace stoves

A modern stove combining style, efficiency and innovative storage technology. One of the key advantages of this stove is the possibility to equip it with accumulation fittings with a total weight of 40 kg. These elements are charged with heat energy during heating and gradually release it back into the space. This heat storage system is ideal for prolonging thermal comfort without the need for frequent reheating. The attractive design of the NAVIA H with its generous panoramic glass not only guarantees a breathtaking view of the flames, but also turns the stove into a distinctive decorative element suitable for various types of interiors, whether traditional or modern. The elegant contours of the stove bring unusual aesthetic pleasure to any space. The NAVIA H stove complies with strict ECODESIGN standards, guaranteeing an environmentally friendly solution. Without compromising on design or performance, it provides comfort and energy savings, making it an excellent investment for your home.

The NAVIA H fireplace stove is suitable for low-energy homes. An EAI (External Air Intake) system is included. The standard version includes the option to connect an upper or rear flue gas exhaust. Thanks to the secondary air intake, the door glass is air-washed to prevent the cumulation of soot. The combustion chamber is lined with chamotte brick tiles. The primary and secondary air intakes are regulated by a single control element. The lower part of the stove includes a storage area with a door for storing a small amount of wood or tools. The unit can be fitted with heat accumulation fittings, thus extending the time of heat radiation after the flame has extinguished.
