Romotop®

The fireplace stoves of the SEIDO 3S family bring an extraordinary aesthetic element to the home, which is emphasised by the name 3S - the symbol for the view of the flames from three sides. The panoramic front glass of each stove model is complemented by two side glass panes that give the stove a very special look.

SEIDO 3S Fireplace stoves

The basic SEIDO 3S model is characterised by its minimalist yet elegant design. The combination of three-sided glazing with a modern combustion chamber allows not only a clean burn, but also a fascinating view of the flames from anywhere in the room. This model is ideal for those looking for quality and functionality in a simple design. Natural serpentine stone, ceramic tile or black durable sheet metal are available as cladding.

This fireplace stove is suitable for low-energy homes. An EAI (External Air Intake) system is included. The standard version includes the option to connect an upper or rear flue gas exhaust. Thanks to the secondary air intake, the door glass is air-washed to prevent the cumulation of soot. The combustion chamber is lined with chamotte brick tiles. The primary and secondary air intakes are regulated by a single control element. The lower part of the stove includes a storage area with a door for storing a small amount of wood or tools.
