

The NAVIA fireplace stove brings a perfect symbiosis of design using rounded shapes and powerful functionality. Its generous panoramic glass not only guarantees a breathtaking view of the flames, but also turns a classic stove into a dominant design element that will enrich any interior, whether traditional or modern.

NAVIA G H Fireplace stoves

Discover the NAVIA G H wood-burning stove, which enriches traditional functions with a unique design element: the printed glass door. This elegant black trim on the outer edge of the glass gives the NAVIA G H a modern and clean look, while its functionality remains high. The stove can be equipped with accumulation fittings weighing up to 40 kg, which efficiently absorb and gradually release heat, thus ensuring long-term thermal comfort even after the fire is extinguished. This accumulation system extends the intervals between refills and reduces energy consumption. The design of the NAVIA G H with its large panoramic glass allows a beautiful view of the flames. The elegance and minimalism in the design bring visual pleasure and emphasize the aesthetic value of each room. Meeting strict ECODESIGN standards ensures that your heater is environmentally friendly, safe and economical, and you are investing in the sustainable comfort of your home.

The NAVIA G H fireplace stove is suitable for low-energy homes. An EAI (External Air Intake) system is included. The standard version includes the option to connect an upper or rear flue gas exhaust. Thanks to the secondary air intake, the door glass is air-washed to prevent the cumulation of soot. The combustion chamber is lined with chamotte brick tiles. The primary and secondary air intakes are regulated by a single control element. The lower part of the stove includes a storage area with a door for storing a small amount of wood or tools. The unit can be fitted with heat accumulation fittings, thus extending the time of heat radiation after the flame has extinguished.
